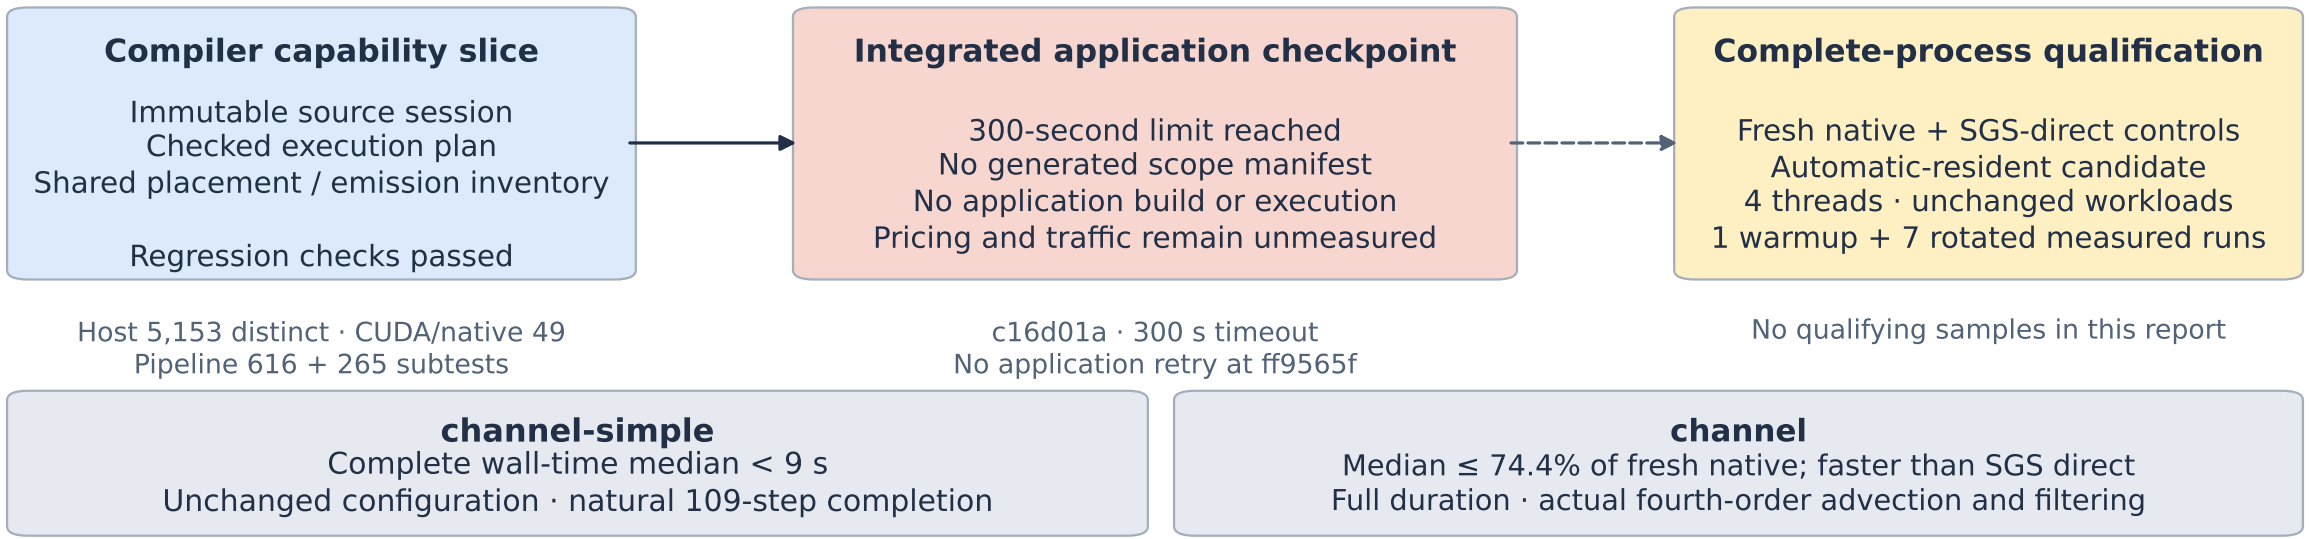
Application generation remains blocked

Both channel cases remain primary · automatic placement and residency are the deliverable



Comfortably met: every candidate run meets its case target and beats SGS direct in the corresponding round.

Missing or incompatible automatic cost estimates select native. That fallback does not complete the automation objective.

No application performance or transfer measurements were produced at this checkpoint.

Case configurations and grids are unchanged; the diagnostic source includes six audited INTENT repairs.

Pressure ownership, cross-stage residency and mathematical reordering remain separate future work.
