Pricing identity before resident-window expansion

Runtime schedule binding improved; automatic channel residency remains unqualified

EXISTING ADMITTED COMPLETE-WINDOW FIXTURE

Existing source and runtime checks

Same checked owner and numerical proofs
Source, build, hardware and environment

→

Effective schedule identity

omp_get_schedule: kind + modifier + chunk
Require native/resident identity agreement

→

Select before owner execution

Matching evidence: measured choice
Changed runtime state: original native

No new application interval is admitted by this identity change.

CHANNEL DIFFUSION → ACCUMULATION: INDEPENDENT OPEN GATES

Discovery

Stable formals; complete original teams

Definitions and prefix

Stage interiors; exact native effects

Selected team

Registered completion and effect proofs

Diffusion corrections

Indirect CPU writes; section coherence

Complete pricing

Branches, children, tiles and build identity

Activation and consumer

Reached selector; application calibration

No application runtime, transfer saving or target qualification is claimed.
